

ProfessionalTM Series

A high-performance front-office solution

Adaptability

Streamline workflow, reduce inventory and publish unique content on-demand for a wide range of applications. Companies around the world—including two-thirds of all Fortune 100 companies—rely on Rimage disc publishing systems for their renowned quality and performance.

The Rimage Professional Series is a compact, all-in-one solution designed specifically for front office settings. It offers an entry point into on-demand disc publishing, allowing single users or workgroups to create discs as easily as they print to the office printer, taking advantage of the convenience of an intelligent network appliance with professional print quality and hands-free operation.

Durable enough to publish hundreds of CDs, DVDs, and Blu-ray Discs™ per day with double the speed and throughput of competing systems, the Rimage Professional Series provides unmatched performance and reliability for maximum uptime.

Save Time and Money with an In-House Solution

The Rimage Professional Series systems represent a powerful enhancement for customers upgrading from lower-volume desktop disc production. The Professional Series is also ideal for businesses seeking to replace costly third-party disc production with a fully automated, in-house digital publishing solution that offers low long-term cost of ownership.

The Professional Series comes standard with powerful features you'd expect from a much more expensive machine:

- The 5400N embedded processor provides a smaller footprint so the unit can tuck into tight spaces. There are fewer cables and connections, which means increased data throughput between the processor and recorders enabling faster disc production.
- The integrated, state-of-the-art Rimage Everest™ thermal retransfer printing system permanently fuses waterproof, scratchproof, photo-realistic images to the surface of the disc. It's faster and has a lower cost-per-disc than inkjet printers.
- The Rimage Producer Software Suite™ provides the applications and features you need to launch a successful in-house disc publishing operation. And it's compatible with Macs, PCs and other platforms.
- A robust software development kit (SDK) and application programming interface (API) simplify integration of workflow applications with Rimage systems.
- Completely enclosed robotics ensure quiet, dust-free operation, while an external output bin allows users to retrieve finished jobs without stopping production by opening the door.

The Rimage Difference: Building a System that Works for You

The Rimage Professional Series systems transform front-office disc publishing. On-demand, fully automated digital production systems provide best-in-class functionality and the opportunity to customize the system with software applications that work for your business.

Professional Series features include:

- Front swappable recorders drastically reduce maintenance delays. Rimage systems continuously monitor recorder operation and take a recorder offline when performance degrades. Replacement recorders can be easily installed in less than a minute—without special tools or technical help.
- Dual recorders and three input bins boost performance, allowing recording of up to 50 each CDs, DVDs, and Blu-ray Discs, or 150 of one type.
- Rimage's extensive network of solution partners expands the versatility of Rimage technologies for integrating digital asset management, content delivery, video workflow, archiving, web fulfillment and other information publishing applications.
- Rimage's exclusive Disc Spanning records large data sets over any number of CDs, DVDs, or Blu-ray Discs.
- Rimage Video Protect provides a strong barrier against unauthorized duplication of video DVDs. The application is tightly integrated into the Rimage software suite, ensuring seamless execution and streamlined workflow.
- Built-in Rimage ZIP Password Protect encrypts and protects CD, DVD, and Blu-ray Disc data, photos or videos—at the highest level the federal government allows.

Rimage Professional Series clients include:

- *Video editing houses and post-production studios*
- *Marketing, sales and communication departments*
- *Manufacturing groups needing on-demand production*
- *Corporate IT departments*
- *Health care and medical imaging facilities*
- *School districts and universities*
- *Law enforcement offices and forensics departments*
